For example, $4584184 \cdot 0.461$ can first be converted to equivalent: $4584.184 \cdot 461 = 9944$ Then put the decimal, so that 9944 is about 10. That results in 9,944. The decimal number division does not need to be very difficult, especially with the worksheets below, where decimals work well. To make these worksheets, we randomly generate a divisor and a quotient first, then multiplied them to get the dividend. Obviously, you will see the quotients only on the answer page, but generating questions in this way causes all decimal division problems to work well.
